Fusion 12 está preparada para macOS 11.0 Big Sur, es compatible con macOS 10.15 Catalina e incluye nuevas características para desarrolladores, administradores de TI y usuarios habituales. Join the Tech Preview Community Fusion and Workstation Fall Release Update We also wanted to take the opportunity, since we're so close to VMworld which has a bit of a different schedule this year, is to let folks know that we won't be releasing a "paid upgrade" for either Fusion or Workstation this year as we often have. F11 will be the last release to support Mojave. F12 may be okay, but even with extensive beta testing and technology preview, there is still so much new and Big Sur is nowhere near stable right now, so who knows how well F12 and Big Sur combo will function upon final shipping, I'd hold off for a couple of months. Virtualization of Windows Intel x86 on Apple Silicon, as we have come to enjoy with Fusion and Parallels, is not possible (don't confuse virtualization with EMULATION, as many people do). Mientras esperamos que Apple lance aún más ordenadores con procesadores Apple silicon, como los MacBook Pro de 14 y 16 pulgadas que deberían llegar este otoño, está claro que la virtualización y las máquinas virtuales están volviendo a la normalidad en el entorno del M1. La compañía, por ahora, no ha anunciado el soporte oficial de Windows 10, especialmente debido a que Microsoft no ofrece todavía una versión ARM del sistema. Más opciones para virtualizar otros sistemas operativos La versión para procesadores M1 de VMware se centrará en permitir la virtualización de las distribuciones de Linux basadas en ARM. If you buy F11 after June 15, you will get a free upgrade. With the coming of Apple Silicon, which is NOT Intel architecture, Apple has made very clear that BootCamp will not be available. xSorry to interruptCSS Error The future of Fusion: Fusion 12 is coming (already available as Technology Preview). it is based on very different design and is only for Catalina or Big Sur due to Apple design changes in macOS. Instead we will continue to invest in the current shipping versions, and will extend their support periods until December 2022, with new updates starting in October. Algo que, en parte, es posible gracias al enfoque tan preciso de esta actualización. Download Fusion for Apple Silicon Now To deliver Fusion for Apple Silicon devices we've had to re-evaluate every part of the Fusion technology stack. SO, don't lose your F11 licenses, or throw out your Macs running Mojave just yet, if running Windows is key for you. At the end of the day, if it is mission critical, the long term future of running Windows in a Mac shop may simply be a real Windows box running real Windows, and remote-ing into it. Emulation might work, but anyone's guess how efficient that will be. With more than a year in development, and a few weeks of a successful Private Tech Preview, it's finally time for us to show the world what we've been working on. Según cuenta Michael Roy, responsable de producto para VMware, en su cuenta de Twitter deberíamos poder ejecutar Windows eligiendo la opción "Otros" cuando configuramos la máquina virtual en nuestro Mac, pero no disponemos de los drivers o de la herramienta VMware Tools. Una beta a la que podemos pedir acceso mediante un formulario online y que precede a una beta pública prevista para dentro de unas dos semanas, aproximadamente. Windows ARM based MIGHT run on Apple Silicon, same with ARM based Linux; just not enough information yet, not even sure all the major players (Apple, Microsoft, Linux world) really know what is going to happen, unless they have had talks behind closed doors, but unlikely Apple would have tipped their hat, and frankly running Windows on a Mac is not high on Apple's priority list. VMware Fusion, la famosa app de virtualización de sistemas, ha lanzado una beta privada para probar la versión para Mac M1 de la aplicación. Fusion 12 PLAYER will be free for personal use and replaces the 'standard' version of Fusion 11. Thanks! VMware Fusion es la mejor opción para ejecutar Windows en Mac y la herramienta definitiva para las tareas de desarrollo y pruebas al crear aplicaciones multiplataforma. Many businesses and me personally, have decided to basically skip Catalina (I've heard people call it the 'Vista' or 'Windows 8' of the Mac world), still use Mojave for mission critical, and await to see what Big Sur will look like. The scope and scale of this undertaking should not be understated, and the success of this project has been the result of a massive ongoing collaboration from many internal teams working together, entirely remotely as we do in this day in age. F12 Pro will replace F11 Pro and will include license for 3 devices, INCLUDING Windows and Linux (i.e. VMware Workstation and Fusion will cross license). We're going to be keeping the Public Tech Preview active for at least the rest of this year and likely into spring, and so we won't be pulling in these changes into our fall release, which means Fusion on Apple silicon is effectively FREE for all users for the time being. If you have already moved to Catalina, F12 SHOULD run much like F11 on Mojave, but again, for business, at least we know F11 and Mojave combo is pretty stable. If you want a decent Mac purchased in the last year or two, I see no reason to buy a new Intel based Mac at this time, until we see what the new Apple Silicon Macs look like and perform like, unless your business requires the latest and fastest. MU is not the place to debate the technology, just wanted to give heads up to users that given all this, YOU BETTER HOLD ON to a few Macs that run Mojave and F11 for right now till all this settles out, if your business relies on running Windows on a Mac. Si bien esta versión no dará soporte a la virtualización de sistemas operativos basados en Intel, según Roy "está totalmente focalizada a hacer que utilizar las máquinas virtuales Linux en Apple silicon sean una maravilla".
